## IFAT 2008 Munich - more successful than ever!

- **2.560 exhibitors: 15 percent increase**
- **120.000 visitors: 10 percent increase**
- **Foreign interest increased by one third**

“Given these results, the IFAT has become the world’s largest and most significant trade fair for environmental technology and environmental services.”

During the IFAT 2008, in total more than 120,000 tradesmen visited the fair, including more than 4,000 foreign visitors that came from 163 different countries. Compared with the 10% increase in the total number of visitors, the amount of

### Overview of topics:

- The IFAT 2008 Munich – a complete success**
- Reparation using 2500 bar – High-Tech for rent**
- Clear of ice without energy supply! On the ball – the new Krumme-website now online!**

foreign visitors increased by nearly 18% over previous events. This corresponds with more than a third of the total number of visitors. Even we, the employees of Krumme GmbH, were overwhelmed by the large crowd of visitors. Between the 5th and the 9th of May 2008, many of our customers learned about our products at our booth in hall A2. Beneficial contacts were established, new products introduced and we had some productive discussions. Overall, this was a good incentive for us to be present at the IFAT in the years to come.

## New in our rental park – jets up to 2500 bar!

By purchasing the new FALCH 25, we continue to focus on high performance on every line! With a jet speed of up to 1700 km/h it is the most powerful handheld machine that is currently available. In the hands of our specially trained professional, the new T25 is well-suited to prepare for a durable overhaul of the concrete in an extremely fast, precise and thorough manner. We already know it – only the best-prepared substrates can guarantee long-term renovation!

There are good reasons for dispensing with solid blasting abrasives: damage to the intact substance is minimized and one can manage without labour-intensive protective and disposal measures. The water-jet leverages the loose substance from the sound stonework or concrete without damaging the intact structures. Now, even the steel-reinforcement can be exposed without risk of damage. The option to individually change the settings to match the substance-condition by choosing the right nozzle typifies the effectiveness of the new jet.

## T25 RENTAL SERVICE:

We rent the Falch T25 from our location in Bad Hersfeld (Germany). As of now, you can rent this high-tech water jet in combination with a specially trained professional (according to UVV regulations for concrete rehabilitation), by the hour or per day.

The professional, transport, insurance, protective gear and wearing parts are included in the rental price. Contact us for more information!

## BRAND NEW: CLEAR OF ICE – PERMANENTLY NEARLY FOR FREE

Clearly, a heated scraper runway simplifies the winter operation considerably. What is new about this is that the operating costs of such a heating system are next to nothing because one can dispense with external energy sources. Both pictures show this type of installation; last winter we undertook several extensive tests and the product proved itself superbly. Innovative technology from Krumme GmbH! We will gladly inform you about our products!
